

Cleaning your velomobile

Needed:

- brush and dustpan
- palette knife

Especially after autumn/winter period your velomobile can be very dirty.

Mud and sand sticks to the walls of your wheel boxes. This velomobile carries 4 kg sand in its wheel boxes.

You can easily remove the sand by palette knife. You do not have to dismount the front wheels. But the rear wheel with wide tire can be a problem. Try it with deflated tire.

Enjoy your light velomobile ;-)
